A suite of tools to quickly quantify the integrated circuit (IC) density that a given semiconductor die will achieve is described in an article by W. Henneberger, "Die Sizinfo—Hautengleichheit und Vereinfachung" ("Die Sizinfo—Density and simplification"), published in Semiconductor World Magazine, February, 2009. The article describes a variety of IC density measurement tools (hereinafter "WaferTool"). WaferTool is a graphical user interface program that allows the user to import the process mask layout of a die on the silicon substrate, calculate the target area, and determine the target area in die to die comparison ("DDC") with respect to the mask layout.

Q: How to get the integer value of a listview? I have a listview which is filled with information, and a button next to the listview. I want to increment the button when it is pressed and decrement when it is released. This is what I have so far.

```
private void Button_next_Click(object sender, EventArgs e) { buttonNext.Enabled = !buttonNext.Enabled; }
```

The problem is I need the integer value of the listview. So how can I get the value of the buttonNext into a variable, so I can use the ++ and -- to increment and decrement the value? Thanks for any help.

A: You can use the Tag property on the Button and retrieve it like so:

```
private int GetListViewItemPosition(ListView lv) { int listviewitemposition = -1; object tag = lv.Tag; if (tag != null) { listviewitemposition = (int)tag; } return listviewitemposition; }
```

This would only work if the ListView you're referencing is set to the "item mode".

If you have a 'Big Idea' or, 'Great Idea', you may need to develop a Brand Strategy. But, before you do that, you need to establish a brand 'platform' that is fit for purpose and, thus, be able
